

Rules of Integration

- sum: $\int f + g \, dx = \int f \, dx + \int g \, dx$
- scaling (by const.): $\int a \cdot f \, dx = a \cdot \int f \, dx$
- product rule (int. by parts): $\int f \cdot g \, dx = Fg - \int Fg' \, dx$
- chain rule (substitution): $\int f(g) \cdot g' \, dx = F(g)$
